The Electric Internal Thread High Pressure Ball Valve is a type of ball valve driven by an electric actuator, featuring an internal thread connection and capable of withstanding high-pressure operating conditions. Its core component is a ball with a through-hole. The electric actuator rotates the ball to open or close the valve. The internal thread connection design allows for quick and reliable threaded assembly with the piping system. Under high-pressure environments, the valve body, ball, and sealing structures are specially designed and reinforced to effectively prevent medium leakage, ensuring good sealing performance and stable operational performance during high-pressure fluid control, meeting the requirements for fluid on-off control in high-pressure conditions.
