Scarifiers help remove large amounts of moss, thatch, and other unwanted debris, helping the soil get all the useful nutrients from the grass. These tools also allow the soil to absorb water and keep your lawn from disease. Now there are some applications on how to use a lawn scarifier, i.e., scarify the lawn with the help of the tool, after scarifying, dry the surface (if required), use the tool as per the requirement. In years past, the only options for removing weeds and thatch were scythes or hand carts, both of which were fairly heavy and cumbersome to use.

Technological advances have rendered these manual methods largely obsolete, as electric and gasoline tools make thatch removal much easier, and innovations continue to emerge. Plenty of lawns is a previous example of a market driver because the more

lawn there are, the more weeds and thatch there will be in the lawn. This would drive the purchase of more weeding machines, thereby increasing the sales of lawn scarifier tools and eventually leading to the growth of the lawn scarifier market. There are many companies in the market that manufacture scarifiers and try to influence the customers by adding unique technological advancements in their products.
