Electric light source molybdenum wire is a metal wire used to manufacture various electric light sources (such as light bulbs, fluorescent lamps, halogen lamps, etc.) and is mainly composed of molybdenum element. Electric light source molybdenum wire has a high melting point, good winding performance and machining performance, and good wear resistance. It is one of the important materials in the electric light source industry. The production process of molybdenum wire for electric light sources generally includes the following steps: molybdenum powder production, molybdenum rod production, molybdenum thick wire rolling and molybdenum thin wire drawing . The size of the electric light source molybdenum wire can be adjusted according to different uses and requirements, generally between 0.04mm and 0.8mm. In addition to electric light sources, the application fields of molybdenum wire for electric light sources also include electric vacuum, semiconductor, electronic technology, aerospace, automobile industry, industrial kilns, machinery manufacturing, welding, 3C and nuclear industries. Electric light source molybdenum wire is a molybdenum product with high added value and wide range of uses. It is one of the important branches of the tungsten and molybdenum industry.
