## Abstracts

The global Electric Locking Bolt market size is predicted to grow from US\$ 436 million in 2025 to US\$ 665 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

In 2024, global Electric Locking Bolt production reached approximately 4.42 million units, with an average market price of about US\$ 95 per unit.

Major manufacturers in the industry reported a gross profit margin between 35% – 50%.

Single-line production capacity generally ranges from 300,000 to 600,000 units per year.

Electric Locking Bolts are electronically controlled locking mechanisms that secure doors or access panels through an electric signal, commonly used in access control systems. They provide fast response, remote control, and enhanced security for residential, commercial, and institutional facilities.

The Electric Locking Bolt market is driven by the global promotion of intelligent building and smart community projects, as the demand for automated access control continues to rise. The integration of IoT technology enables remote monitoring and fault diagnosis of electric locking bolts, further expanding their application scope. The increasing emphasis on public security (such as anti-theft, anti-intrusion) also boosts the replacement demand for traditional mechanical locks with electric locking bolts. Additionally, the growth of the industrial automation sector drives the use of high-durability electric locking bolts in workshop safety doors. However, challenges include compatibility issues with different access control systems and higher maintenance costs compared to mechanical locks. Overall, with the deepening of urban intelligence and the upgrading of security needs, the market is expected to maintain rapid growth, with

product innovation focusing on low-power consumption and anti-tampering functions.
