The global Electric LRD Overload Relay market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electric LRD Overload Relays are protective devices designed to safeguard electrical circuits from excessive current loads. They are crucial components in various electrical systems, preventing potential damage to equipment and ensuring safe operation.

LRD typically stands for 'Long-Time Retard' or 'Long-Time Inverse,' indicating that the relay has a delayed response to overload currents. This delay allows for short-term overloads that might occur during normal operation (e.g., motor starting) without triggering a trip.

Overload Relays work by monitoring the current flowing through a circuit. When the current exceeds a predetermined threshold for an extended period, the relay activates, interrupting the power supply to protect the circuit.

United States market for Electric LRD Overload Relay is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
