The global Electric Monorail System (EMS) market size is predicted to grow from US$ 448 million in 2025 to US$ 559 million in 2031; it is expected to grow at a CAGR of 3.7% from 2025 to 2031.

An Electric Monorail System (EMS) is an overhead electrified monorail conveyance conveyor that is typically mounted on building trusses or column supported structure consisting of individual motorized carriers that move independently throughout a system that can be diverted, and converged to various paths by conveyor track switches.

Electric monorail systems are ideal for fast and challenging processes. Electric monorail systems transport material and get it to where it is needed with little to no noise. The electric monorail system is mounted on an elevated rack, saving floor space for production and other processes. Unlike ground systems, electric monorail systems eliminate the risk of falling parts that could damage the vehicle or the line. The space-saving and compact conveyor system can be adapted to various line layouts. The electric monorail system can also be easily combined with other conveyor systems.
