An electric motor grader is an engineering machinery equipment powered by an electric motor, primarily used for site leveling, subgrade trimming, and pavement base construction in earthwork projects. Its core components include an electric drive system (such as permanent magnet synchronous motors or asynchronous motors), hydraulic actuators (controlling the lifting and tilting of the grading blade), intelligent control systems (supporting automatic leveling functions), and a frame chassis. Compared with traditional diesel graders, electric motor graders offer advantages such as zero emissions, low noise, low operating costs, and easy maintenance, and can be powered by battery packs or external cables, suitable for municipal projects with high environmental requirements, indoor site leveling, and new energy construction scenarios.
