An electric motorcycle hub motor is a type of electric motor integrated directly into the wheel hub, eliminating the need for chains, belts, or other transmission mechanisms. This design simplifies the drivetrain, reduces maintenance, and offers several other advantages. There are two types of motors in electric motorcycles. One is a central motor installed in the center of the body. The other is a hub-type motor integrated with the side wheel and the driving wheel installed on the side of the driving wheel. There are mostly small cars in the Chinese market, so in-wheel motors are the main ones.
