## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

According to the mirror shape of Electric Outside Rear View Mirror, it can be divided into three series: plane mirror, spherical mirror and double curvature mirror. The rearview mirror has a problem with the horizon, that is, the range that the mirror surface can reflect. There are three elements of vision in the industry, namely the distance between the driver's eyes and the rearview mirror; the size of the rearview mirror and the radius of curvature of the rearview mirror. There is a certain relationship between these three elements. When the distance and size of the rearview mirror are the same, the smaller the radius of curvature of the mirror surface, the larger the horizon reflected by the mirror surface. When the radius of curvature of the mirror surface is the same, the larger the size of the mirror surface, the larger the horizon reflected by the mirror surface.
