The global Electric Permanent Magnet Spreader market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The electro-permanent magnet spreader is a lifting tool that combines electromagnetic principles with permanent magnet technology. It is mainly used to transport ferromagnetic materials, such as steel plates, steel pipes, etc. Its working principle is to generate a strong magnetic field through the electromagnet to adsorb metal objects when the power is on. After the power is off, the built-in permanent magnet maintains continuous magnetic force to ensure that the object will not fall off during the handling process. The electromagnetic spreader combines the convenience of the electromagnetic spreader with the safety of the permanent magnet spreader, and can carry out material handling operations efficiently and safely in a variety of industrial environments.
