The global Electric Plastic Welding Rods market size is predicted to grow from US$ 733 million in 2025 to US$ 1044 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

In 2024, global Electric Plastic Welding Rods production reached approximately 0.35 million tons, with an average global market price of around US$ 2000 per ton. The production capacity about 140 kg per day. Gross Profit Margin: 30-50%.

Electric Plastic Welding Rods are consumable filler materials used in plastic welding processes, where heat is applied (commonly by hot air, extrusion, or an electrically heated welding tool) to soften both the rod and the base plastic, allowing them to fuse together and form a strong joint.

The chain begins with upstream raw-materials suppliers producing thermoplastic resins (PE, PP, PVC, PVDF, ABS etc.), often virgin polymer pellets; additives (colorants, stabilizers, fillers) are mixed in depending on required properties. These feed into manufacturers who operate extrusion lines (single- or twin-screw extruders) that melt, shape, and calibrate welding rods / wires to specified diameters and cross-sections, applying quality control (material purity, tensile strength, melting flow rate etc.). Some manufacturers also offer custom rod types matched to specific sheet or part materials. The produced rods are then packaged and distributed (wholesalers, specialized plastic welding suppliers, industrial chemical distributors), possibly with complementary equipment like hand welders or extrusion welders. At the end of the chain, end-users—fabrication shops, chemical / storage tank makers, pipe welding specialists, maintenance operations—use the rods in welding/fusing processes, often needing support (technical guidance, matching filler rod to base material, troubleshooting weld
