## Abstracts

The global Electric Radiant Heat Panels market size is predicted to grow from US\$ 370 million in 2025 to US\$ 564 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

Infrared panels work via radiation and consequently minimize heat loss through ventilation as, since the air is not being heated as it would be by a radiator, there is no heated air to escape under doors, cracks or crevices.

Rather than heating the space in a room, infrared directly warms up the objects and people in the room ? reducing heat loss as well as putting a stop to dust circulation. This process makes infrared heating panels a highly efficient, effective and healthier way to heat a property.
