The global Electric Rideable Luggage market size is predicted to grow from US$ 352 million in 2025 to US$ 883 million in 2032; it is expected to grow at a CAGR of 10.9% from 2026 to 2032.

Electric Rideable Luggage is an innovative product that has emerged in recent years, integrating traditional luggage storage with electric mobility. Its core value lies in solving the "last mile" problem in scenarios such as airports, high-speed rail stations, and large exhibitions. It upgrades what was originally a draggable suitcase into a short-distance riding tool that can carry a person, effectively reducing physical exertion during travel.

In terms of working principle, these products typically use a removable lithium battery as a power source, integrating a brushless motor front wheel and intelligent control system at the bottom of the casing. Users can automatically extend the electric front wheel and handlebars with a single button. After sitting on the casing, acceleration, braking, and reversing can be controlled via the smart handlebars or a mobile app. Its maximum speed is generally between 9.9 km/h and 13 km/h, with a range of approximately 8-15 kilometers, and it is equipped with a USB port for charging mobile phones and other electronic devices. To meet aviation standards, the battery capacity is typically designed to be below 100Wh, and it supports quick removal for security checks.

In 2025, global Electric Rideable Luggage sales reached approximately 858 K Units, with an average global market price of around 420 US$/Unit. Production capacity reached 1,500 K Units, with a gross profit margin of approximately 26%.

United States market for Electric Rideable Luggage is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
