The global Electric Scooter Rental App market size is predicted to grow from US\$ 265 million in 2025 to US\$ 381 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

An Electric Scooter Rental App is a mobile application that enables users to locate, unlock, rent, and pay for shared electric scooters for short-distance urban travel, typically operating on a dockless or station-based model; core features include real-time GPS vehicle tracking, digital payment processing, smart lock/unlock functionality via Bluetooth/NFC, ride history tracking, safety instructions, and customer support, serving as the central interface connecting riders with fleet operators to facilitate convenient, on-demand last-mile transportation while supporting sustainable mobility goals in cities worldwide.

The electric scooter rental app industry is characterized by strong growth momentum driven by urbanization, demand for eco-friendly last-mile solutions, and integration with multi-modal transportation platforms; key trends include expansion into tier-2/3 cities, adoption of swappable batteries and IoT-enabled fleet management, subscription-based pricing models, and enhanced safety features like geofencing and helmet detection; significant opportunities lie in enterprise partnerships for employee mobility, integration with public transit systems, and data-driven urban planning collaborations; however, the sector faces persistent challenges including strict regulatory frameworks varying by jurisdiction, operational costs (maintenance, charging, rebalancing), safety concerns and accident liabilities, intense market competition leading to price pressures, and sustainability issues related to battery disposal and vehicle lifespan, with successful operators increasingly focusing on profitability through operational efficiency, premium services, and technology innovation.
