The European-style electric single-girder overhead crane is a lightweight lifting device suspended from a track on the roof of a factory building. It consists of an I-beam main beam, an electric hoist, a traveling mechanism, and an electrical control system. It operates by suspending wheels on the lower flanges of the I-beam track, enabling the lifting and translation of materials within a rectangular space. Lifting capacities typically range from 0.5 to 10 tons, with spans from 3 to 16 meters.

Upstream industries mainly include suppliers of I-beams and other profiles, manufacturers of electric hoists and motor reducers, lifting hooks and wire ropes, wheel sets and buffers, and core components such as electrical control boxes and safety devices. Downstream industries encompass machining workshops, assembly lines, warehousing and logistics centers, repair shops, and various industrial and mining enterprises, with applications achieved through direct sales from crane manufacturers, project support, and channel agents. The global unit price of a European-style electric single-girder overhead crane is US\$29,500, with annual sales of approximately 5,130 units and a global annual production capacity of 6,000 units. The industry profit margin is 23%.
