The global Electric Solar Panel Cleaning Robot market size is predicted to grow from US$ 391 million in 2025 to US$ 905 million in 2032; it is expected to grow at a CAGR of 12.8% from 2026 to 2032.

Electric Solar Panel Cleaning Robot is an electrically powered automated cleaning device for solar panel operation and maintenance, using motor-driven movement, brush or dry-cleaning modules, sensors, controllers, and battery or external power supply to remove dust, sand, bird droppings, and other deposits from photovoltaic module surfaces. Compared with a general PV panel cleaning robot, this product definition emphasizes electric drive, controllable cleaning force, stable movement, lower operating noise, reduced water dependence, and suitability for repeated cleaning tasks in ground-mounted plants, distributed rooftop systems, industrial and commercial rooftops, and high-dust regions where cleaning efficiency directly affects power generation output. In 2025, production was approximately 80,000 units and the average price was USD 5,000 per unit. The industry’s capacity utilization rate in 2025 was about 70% and the average gross margin was around 30%. Upstream, the key inputs include brushless motors, lithium batteries, sensors, and controllers, with representative suppliers such as Nidec, CATL, and Bosch providing drive motors, battery systems, sensing components, and control modules. The midstream segment focuses on electric drive system integration, robot structural design, panel walking mechanism development, cleaning module integration, battery endurance optimization, obstacle detection, route planning, dust and sand adaptability, waterproof and weather-resistant design, remote monitoring, safety testing, and automated assembly, which together determine cleaning efficiency, operating stability, panel compatibility, service life, and cost competitiveness. Downstream, Electric Solar Panel Cleaning Robot is mainly used in ground-mounted photovoltaic power stations and rooftop photovoltaic systems, with representative

photovoltaic power generation companies including China Three Gorges Renewables, Enel Green Power, and NextEra Energy.

Electric Solar Panel Cleaning Robot demand will be influenced by photovoltaic operators' need to control soiling losses with lower manual input and more predictable cleaning quality. For ground-mounted solar plants, electric-drive systems are useful where dust, sand, and large module areas make manual cleaning costly and inconsistent. Rooftop projects bring a different requirement, as limited access and safety concerns favor compact robots with stable movement and controllable cleaning force. As water-saving operation becomes more important, customers will compare equipment by drive reliability, battery endurance, panel protection, cleaning efficiency, weather resistance, remote monitoring, and maintenance economics.
