An Electric Spider Crane is a compact, battery-powered lifting machine mounted on extendable outriggers (“legs”) that stabilize the unit on uneven or confined surfaces. Equipped with a telescopic boom and electric winch, it delivers precise, low-emission hoisting in tight spaces—indoors or outdoors—where traditional cranes cannot operate. Key features include remote-control operation, multi-position outriggers for 360° stability, and rubber or track mobility for minimal floor loads. Electric spider cranes excel in applications such as indoor facility maintenance, glass installation, machinery assembly, and urban construction where portability, low noise, and zero exhaust are essential.
