The global Electric Storage Heater market size is predicted to grow from US$ 2434 million in 2025 to US$ 3051 million in 2031; it is expected to grow at a CAGR of 3.8% from 2025 to 2031.

The electric storage heater market is experiencing significant growth and is poised for further expansion in the coming years. Electric storage heaters are heating devices that utilize electricity to generate and store heat during off-peak hours, providing warmth when needed. These heaters are popular for their energy-efficient operation, cost-effectiveness, and ease of installation. The increasing demand for sustainable and efficient heating solutions, government initiatives promoting energy conservation, and the rising focus on reducing carbon emissions are driving the growth of the electric storage heater market. Electric storage heaters offer advantages such as programmable controls, thermal insulation, and the ability to take advantage of lower electricity tariffs during off-peak periods. Furthermore, advancements in technology have led to the development of smart electric storage heaters with features like remote control, adaptive heating algorithms, and integration with home automation systems. As consumers seek energy-efficient and environmentally friendly heating options, the electric storage heater market is expected to witness continuous innovation, improved performance, and increased adoption across residential, commercial, and industrial sectors.
