An electric thermal fogging machine is a device used for dispersing insecticides, fungicides, or disinfectants in the form of fog. It operates by heating a solution, which then turns into fog or mist, allowing for effective coverage over large areas. Key features include:

**Electric Power Source:** Unlike traditional gas-powered foggers, these machines rely on electricity, making them quieter and more environmentally friendly.

**Adjustable Fog Output:** Users can control the density of the fog based on the application requirements.

**Wide Application Range:** Commonly used in agriculture, public health, pest control, and sanitation, particularly in large open areas.

**Easy Operation:** Often designed for user-friendly handling, making them suitable for both professionals and casual users.
