Electric Toothbrush Pressure Sensor is a key component in the electric toothbrush, which is responsible for monitoring the force of the brush head on the teeth during the brushing process, thereby ensuring the effectiveness and safety of the brushing process. Electric toothbrushes are becoming increasingly popular in human life. With the promotion of the market, people hope that toothbrushes can become more intelligent and provide better services for our teeth. The electric toothbrush mainly makes the brush head produce high-frequency vibration through the rapid rotation and vibration of the motor core, instantly decomposes the toothpaste into fine foam, and thoroughly cleans the crevices of teeth. Compared to regular toothbrushes, electric toothbrushes can more thoroughly remove dental plaque, reduce oral diseases such as gingivitis, periodontal disease, and gum bleeding.

United States market for Electric Toothbrush Pressure Sensor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
