Electric two-wheelers drive systems are the components and technology used to power and control electric bicycles, scooters, and motorcycles. These systems typically include an electric motor, battery pack, controller, and various sensors. The electric motor, which can be hub-mounted or mid-drive, converts electrical energy from the battery into mechanical power to drive the wheels. The controller regulates the power flow and manages the performance of the motor, while sensors provide feedback on speed, torque, and battery status. Advanced drive systems may also feature regenerative braking to recapture energy during deceleration. These systems offer a clean, efficient, and quiet alternative to traditional internal combustion engines, contributing to sustainable urban mobility and reducing environmental impact.

The global Electric Two-wheelers Drive Systems market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
