The global Electric Underground Load Haul Dump Machine market size is predicted to grow from US\$ 636 million in 2025 to US\$ 1687 million in 2032; it is expected to grow at a CAGR of 15.0% from 2026 to 2032.

Electric Underground Load Haul Dump Machines are underground mining loaders used to load, haul, and dump ore or waste rock in underground mines. The equipment is powered by battery-electric systems, cable-electric systems, or hybrid electric drive systems, and is mainly used in underground metal mines, non-metal mines, coal mines, tunnel excavation, and underground construction projects. Compared with diesel LHD machines, electric underground LHD machines reduce underground exhaust emissions, heat generation, ventilation demand, and noise, while improving energy efficiency and working environment. This category excludes diesel underground LHD machines, surface wheel loaders, underground dump trucks, shuttle cars, and general construction loaders. The industrial chain of Electric Underground Load Haul Dump Machines includes upstream suppliers of battery packs, electric drive systems, traction motors, power electronics, charging systems, cable reels, hydraulic systems, axles, transmissions, tires, steel structures, buckets, sensors, braking systems, control systems, thermal management systems, and mining safety components. Midstream manufacturers integrate vehicle chassis, electric powertrains, loading buckets, articulated steering systems, hydraulic lifting systems, operator cabins, battery or cable power systems, automation modules, remote-control systems, and safety systems into complete machines. Downstream applications include underground metal mining, underground coal mining, gold mines, copper mines, nickel mines, zinc mines, tunnel construction, underground development, and mine contractors. Supporting services include charging infrastructure, battery replacement, cable maintenance, spare parts supply, fleet management, automation upgrades, operator training, maintenance, and

lifecycle service. In 2025, global Electric Underground Load Haul Dump Machine production reached approximately 591 units, with an average global market price of around US\$1,100,000 per unit. The gross profit margin of major companies in the industry is between 28%–48%. In 2025, the global production capacity of electric underground load haul dump machines was approximately 844 units.

The Electric Underground Load Haul Dump Machine market is driven by underground mine electrification, stricter emission control, ventilation cost reduction, worker safety, battery technology progress, and automation demand. Underground LHD loaders are a core equipment category in load-and-haul operations, and leading suppliers such as Epiroc offer both battery-driven and electric underground loaders for mining applications. Sandvik's Toro LH518iB is an 18-ton battery-electric loader designed around a lithium-iron-phosphate battery and electric driveline, while Epiroc's Scooptram ST18 SG is a fully battery-electric 18-tonne loader, showing that electric LHDs are moving from demonstration projects toward commercial deployment. Manufacturers are improving battery capacity, charging speed, cable management, power density, automation readiness, remote operation, heat reduction, and maintenance efficiency. Overall, the market is expected to grow faster than conventional diesel LHDs as underground mines pursue lower emissions, lower ventilation costs, and higher productivity.
