The report requires updating with new data and is sent in 48 hours after order is placed.

The optimal operating temperature range of the power battery is about 20-30°C. At low temperature, the battery capacity is low, and the charge and discharge performance is poor; at high temperature, the battery cycle life will be shortened, and safety problems such as explosion may even occur at high temperature. Multiple battery cells form a battery pack in series and parallel mode, and the heat generated during charging and discharging affects each other. Keeping the power battery pack to work within a reasonable temperature range requires a sophisticated electric vehicle battery cooling system. The main components of the electric vehicle battery cooling system are a cooling plate, a cooler, an electronic water pump, and an electronic expansion valve.
