The global Electric Vehicle Battery Immersion Cooling System market size is predicted to grow from US\$ 73.37 million in 2025 to US\$ 175 million in 2032; it is expected to grow at a CAGR of 13.0% from 2026 to 2032.

Electric Vehicle Battery Immersion Cooling Systems are thermal management systems in which the battery cells or modules are fully immersed in dielectric coolant to efficiently remove heat generated during charging, discharging, and high-power operation. These systems provide uniform temperature control, improve battery lifespan, enhance safety, and support high-performance EVs under extreme thermal conditions. The gross profit margin of major companies in the industry is between 20%-35%.

The electric vehicle battery immersion cooling system market is a specialized segment of high-performance battery thermal management. Growth is primarily driven by the demand for high-power, long-range EVs, and requirements for battery safety and extended lifespan. Immersion cooling provides uniform temperature control, reduces local overheating risk, enhances battery cycle life, and meets thermal management demands during high-power charging and discharging, particularly for electric buses, logistics vehicles, and high-performance passenger EVs. Technology trends include the development of low-viscosity, high-insulation dielectric coolants, modular pump and piping systems, integrated temperature sensors, and intelligent control algorithms. As battery capacities increase and charge/discharge rates rise, immersion cooling is becoming a standard solution for high-performance EVs. Overall, the market is mid-sized, technologically intensive, and expected to grow steadily with increased adoption of high-power EVs and commercial electric vehicles.
