Electric vehicle graphite bipolar plates are one of the key components of electric vehicle batteries and are used to store and release electrical energy. It is usually made of graphite material and has a bipolar structure, i.e. positive and negative poles. These bipolar plates are located in the battery module and store and release electrical energy through reactions with electrolytes and electrodes. These graphite bipolar plates realize the charging and discharging functions of the battery through the process of inserting/extracting lithium ions, thereby providing long-lasting and stable power for electric vehicles. As electric vehicle technology continues to develop, the design and manufacturing of graphite bipolar plates are constantly optimized to improve the energy density, cycle life and safety of batteries.

The global Electric Vehicle Bipolar Plate market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
