## Abstracts

The global Electric Vehicle Camera market size is predicted to grow from US\$ 2755 million in 2025 to US\$ 8539 million in 2031; it is expected to grow at a CAGR of 20.7% from 2025 to 2031.

An Electric Vehicle (EV) camera, within the context of electric vehicles, refers to a device that captures visual information to enhance the vehicle's safety, navigation, and overall driving experience. These cameras are an integral part of the vehicle's advanced driver assistance systems (ADAS) and contribute to the development of semi-autonomous and autonomous driving capabilities.

**Growing Demand for ADAS and Autonomous Driving:** The increasing integration of Advanced Driver Assistance Systems (ADAS) and the development of autonomous driving capabilities were driving the demand for sophisticated camera systems in electric vehicles. These systems rely on cameras for functions such as lane-keeping, adaptive cruise control, and collision avoidance.

**Increasing Number of Cameras per Vehicle:** There was a trend toward incorporating multiple cameras into electric vehicles for comprehensive coverage. This includes front-view cameras, rear-view cameras, side-view cameras, and even interior-facing cameras for driver monitoring systems.

**High-Resolution Cameras:** The demand for higher resolution cameras was on the rise to support more accurate object recognition and enhance overall image quality. High-resolution cameras are crucial for applications like traffic sign recognition, pedestrian detection, and obstacle avoidance.

Sensor Fusion: Manufacturers were increasingly focusing on sensor fusion, integrating data from cameras with information from other sensors such as radar and lidar. This approach enhances the overall perception capabilities of the vehicle, especially in challenging environmental conditions.
