The charging pile charging operation cloud platform conducts uninterrupted data collection and monitoring of the charging pile sites and each charging pile connected to the system through the Internet of Things technology. At the same time, various faults such as charger over-temperature protection, charger input and output over-voltage, under-voltage, insulation detection fault and a series of faults are given early warning; after the user scans the QR code to pay through the WeChat applet, the system initiates a charging request. Control the charging pile corresponding to the QR code to complete the charging process of the electric vehicle.
