Abstracts

The global Electric Vehicle Coolant Pump market size is predicted to grow from US\$ 2045 million in 2025 to US\$ 4570 million in 2032; it is expected to grow at a CAGR of 12.2% from 2026 to 2032.

Electric Vehicle Coolant Pump is an electrically driven circulation pump used in the liquid thermal-management circuits of electric vehicles to maintain controlled coolant flow among heat-generating components and heat-exchange devices. The product typically combines a brushless electric motor, centrifugal hydraulic section, electronic controller, pump housing and electrical interface, and circulates water-glycol or other automotive coolant through battery packs, electric drive systems, power electronics, heat-pump circuits and integrated vehicle thermal-management systems. Unlike a mechanical engine-driven pump, Electric Vehicle Coolant Pump can operate independently of vehicle propulsion speed and dynamically regulate flow according to temperature, operating load and control commands, supporting more precise and energy-efficient thermal management. This study covers standalone and integrated Electric Vehicle Coolant Pump products used in electric vehicle thermal-management systems, including low-voltage and high-voltage architectures and products across different rated-power ranges. The research object focuses on commercially supplied automotive coolant circulation pumps serving battery thermal management, electric drive system cooling, power electronics cooling, heat pump and cabin thermal management, integrated vehicle thermal management and other vehicle cooling circuits.

Key Findings

Global Electric Vehicle Coolant Pump sales reached approximately 55.0 million units in 2025

The global average selling price was approximately USD 38 per unit in 2025

Average industry gross margin was approximately 24% in 2025

Multiple Electric Vehicle Coolant Pumps can be deployed within one vehicle thermal-management architecture

Battery and integrated vehicle thermal management are major demand directions

Market Trends

The Electric Vehicle Coolant Pump industry is moving from basic fixed-flow auxiliary pumping toward electronically controlled, variable-speed and system-integrated thermal-management solutions. As electric vehicle platforms become more thermally complex, pumps are increasingly required to coordinate battery cooling, electric drive cooling, power electronics cooling, cabin heating and heat-pump operation within interconnected coolant circuits. Brushless motor technology, compact electronic control and digital communication are becoming standard design directions, while higher efficiency, lower acoustic noise, reduced weight and improved reliability remain important vehicle-level requirements. At the architecture level, standalone pumps continue to represent a large part of current demand, but greater integration with thermal-management modules, valves and heat exchangers is creating opportunities for integrated products. Low-voltage pumps remain widely used in passenger vehicle auxiliary circuits, while higher-power and high-voltage products are becoming more relevant where greater coolant flow, higher thermal loads or centralized thermal-management architectures are required. The industry is therefore evolving from a discrete pump component toward a controllable thermal-fluid actuator within the broader vehicle energy-management system.

Market Dynamics

Drivers

The principal driver for Electric Vehicle Coolant Pump demand is the continued expansion of electric vehicle production together with increasing thermal-management complexity per vehicle. Battery packs, traction motors, inverters, DC/DC converters and other power-electronic components all operate within defined temperature windows, creating multiple coolant-flow requirements that are not present in conventional

mechanical cooling architectures. Higher charging power, faster acceleration, greater power density and tighter packaging further increase thermal loads and make active coolant circulation more important. In addition, heat-pump systems and integrated thermal-management strategies increasingly use coolant loops to transfer heat among the battery, drivetrain and cabin, raising the number and functional importance of electrically controlled pumps. The growing use of multiple pumps within a single vehicle also means Electric Vehicle Coolant Pump demand can increase faster than vehicle production alone.

Restraints

The market remains subject to strong automotive cost pressure because Electric Vehicle Coolant Pump products are high-volume components purchased by vehicle manufacturers and Tier 1 system suppliers under strict annual price-reduction expectations. Although the pump integrates motor, hydraulic and electronic-control functions, customers continue to demand lower cost, smaller size and higher efficiency simultaneously. Long vehicle qualification cycles also limit the speed at which new suppliers can enter major automotive programs, while product failure can directly affect battery temperature, power limitation or vehicle operation, requiring extensive durability and validation. Another restraint is the increasing integration of pumps into broader thermal-management modules. Although this creates system-level opportunities, it can reduce the visibility and independent value of the pump as a standalone component and increase the bargaining power of large system integrators.

Opportunities

The most attractive opportunities are associated with higher thermal loads, faster charging, integrated thermal-management architectures and the transition toward software-controlled vehicle systems. Battery thermal management remains a core application, while integrated vehicle thermal management is creating additional demand for pumps that can operate across multiple modes and wider flow ranges. Higher-power Electric Vehicle Coolant Pump products have potential in performance vehicles, electric commercial vehicles and centralized cooling loops, while high-voltage pump architectures can reduce current requirements in applications with higher electrical power. Suppliers also have opportunities to increase value through integrated electronics, intelligent diagnostics, communication interfaces, efficiency optimization and tighter integration with valves and thermal-management modules. Localization of electric vehicle supply chains, particularly in high-volume Asian manufacturing markets, also creates opportunities for regional suppliers capable of meeting automotive-grade quality and cost requirements.

Challenges

Electric Vehicle Coolant Pump suppliers must balance hydraulic performance, electrical efficiency, acoustic behavior, package size, cost and long-term durability under harsh automotive conditions. Pumps are exposed to continuous temperature cycling, vibration, coolant chemistry, electrical transients and extended operating hours, while even small degradation in motor efficiency or hydraulic performance can affect the thermal efficiency of the overall vehicle. Cavitation control, sealing reliability, bearing life, electromagnetic compatibility and electronic-controller robustness are therefore important engineering challenges. Commercially, suppliers also face intense competition from established global automotive component groups and rapidly developing local manufacturers. As thermal-management modules become more integrated, pump suppliers must decide whether to remain specialized component providers or expand toward larger system-level offerings, which requires broader engineering capabilities and greater development investment.

Industry Chain Analysis

The upstream value chain of Electric Vehicle Coolant Pump includes brushless motors, permanent magnets, copper windings, power semiconductor devices, microcontrollers, printed circuit boards, sensors, electrical connectors, bearings, seals, engineering plastics, aluminum or polymer housings and precision-molded impellers. Performance is determined by the interaction of electrical, hydraulic, thermal and mechanical design rather than by any single component. Motor efficiency and electronic control affect electrical consumption, while impeller geometry, flow-channel design and structural tolerances determine hydraulic efficiency, pressure capability and acoustic behavior. Materials must also maintain dimensional stability and chemical compatibility with automotive coolant over extended service periods.

The midstream combines motor development, hydraulic design, electronic-control integration, injection molding or metal processing, assembly, calibration and automotive reliability validation. Manufacturing scale, platform standardization and automated production are important because annual volumes can be high while unit prices remain relatively moderate. The estimated industry gross margin of approximately 24% in 2025 reflects this combination of technical content and automotive cost pressure.

Downstream customers include electric vehicle manufacturers, thermal-management system integrators and automotive component suppliers, with end-use demand distributed across Battery Thermal Management, Electric Drive System Cooling, Power Electronics Cooling, Heat Pump & Cabin Thermal Management, Integrated Vehicle

Thermal Management and other coolant circuits.

Segment Insights

By Type, the Electric Vehicle Coolant Pump market consists of Standalone and Integrated products. Standalone pumps remain important because they can be independently positioned in battery, electric drive or power-electronics coolant circuits and allow flexible thermal-system architecture. Integrated pumps are increasingly incorporated into thermal-management modules that combine pumps, valves, manifolds and heat-exchange functions, reducing piping complexity, installation space and assembly requirements. As electric vehicle platforms move toward centralized thermal management, the strategic importance of Integrated products is increasing, although Standalone products continue to retain broad application flexibility.

By Rated Power, the market is divided into ≤ 100 W, $>100\text{--}300$ W and >300 W categories. Lower-power pumps are widely suitable for auxiliary and localized cooling loops, while the $>100\text{--}300$ W range serves higher coolant-flow and broader system requirements. Products above 300 W address more demanding thermal loads and centralized cooling architectures, including selected high-performance passenger vehicles and electric commercial vehicles. By Voltage, Low Voltage products at ≤ 60 V remain the mainstream architecture for many passenger vehicle applications, while High Voltage products above 60 V provide an alternative for higher-power pumping requirements. The product mix is therefore gradually broadening from conventional low-voltage auxiliary pumps toward a wider range of power and voltage configurations.

Downstream Market Opportunities

Battery Thermal Management remains one of the most important application areas because battery temperature directly affects charging performance, output capability, service life and safety. Electric Drive System Cooling and Power Electronics Cooling provide stable demand as motor and inverter power density increases. Heat Pump & Cabin Thermal Management is becoming more relevant as electric vehicles increasingly optimize energy transfer between passenger comfort and powertrain thermal requirements. The most significant structural opportunity is Integrated Vehicle Thermal Management, where coolant pumps operate as active flow-control components within centralized systems linking battery, drivetrain, cabin and heat-pump circuits. This architecture can increase pump operating complexity and technical value even where the number of discrete thermal components is reduced.

Regional Insights

Asia-Pacific represents the largest unit-demand region for Electric Vehicle Coolant Pump products, supported by the concentration of global electric vehicle manufacturing and automotive component production in China, Japan, South Korea and other Asian markets. China is particularly important because of its large electric vehicle production base and rapidly developing domestic thermal-management supply chain. Regional suppliers increasingly compete in electronic pumps, valves and integrated thermal-management components, while international Tier 1 manufacturers continue to localize production and engineering capacity. The market therefore combines high unit volumes, strong cost competition and relatively rapid product iteration.

Europe and North America represent important high-value markets, supported by established automotive OEMs, advanced electric vehicle platforms and increasing adoption of integrated thermal-management systems. European demand is closely associated with premium passenger vehicles, performance requirements and mature thermal-management engineering, while North American demand is supported by passenger electric vehicles, electric pickup trucks and commercial applications. Regional differences are increasingly reflected in vehicle architecture and localization strategies rather than in basic pump functionality. Suppliers with global production footprints, local engineering support and scalable platform designs are better positioned to serve multinational automotive programs.

Competitive Landscape Analysis

The Electric Vehicle Coolant Pump market has a diversified competitive structure consisting of established European, Japanese and Korean automotive component suppliers together with increasingly competitive Chinese manufacturers. Traditional global suppliers generally benefit from long-standing vehicle-platform relationships, system-integration capability, automotive qualification experience and global manufacturing networks, while Chinese suppliers increasingly compete through localized engineering, cost efficiency, rapid development cycles and close integration with domestic electric vehicle manufacturers. Competitive differentiation is shifting beyond basic flow and pressure performance toward system efficiency, compactness, acoustic optimization, electronics integration, communication capability and compatibility with integrated thermal-management architectures. Suppliers with portfolios spanning different rated-power and voltage classes can address a broader range of vehicle platforms, while companies capable of supplying both standalone pumps and integrated thermal-management solutions may capture greater system

value. At the same time, automotive customers continue to exert substantial pricing pressure, meaning manufacturing scale, automated production, platform reuse and supply-chain efficiency remain critical to sustaining profitability.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Electric Vehicle Coolant Pump Industry Forecast” looks at past sales and reviews total world Electric Vehicle Coolant Pump sales in 2025, providing a comprehensive analysis by region and market sector of projected Electric Vehicle Coolant Pump sales for 2026 through 2032. With Electric Vehicle Coolant Pump sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US\$ millions of the world Electric Vehicle Coolant Pump industry.

This Insight Report provides a comprehensive analysis of the global Electric Vehicle Coolant Pump landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Electric Vehicle Coolant Pump portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Electric Vehicle Coolant Pump market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Electric Vehicle Coolant Pump and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Electric Vehicle Coolant Pump.

This report presents a comprehensive overview, market shares, and growth opportunities of Electric Vehicle Coolant Pump market by product type, application, key manufacturers and key regions and countries.

Market Segmentation

Segmentation by Type:

Standalone

Integrated

Segmentation by Rated Power:

≤100 W

>100–300 W

>300 W

Segmentation by Voltage System:

Low Voltage (≤60 V)

High Voltage (>60 V)

Segmentation by Application:

Battery Thermal Management

Electric Drive System Cooling

Power Electronics Cooling

Heat Pump & Cabin Thermal Management

Integrated Vehicle Thermal Management

Other

This report also splits the market by region:

Americas

United States

Canada

Mexico

Brazil

APAC

China

Japan

Korea

Southeast Asia

India

Australia

Europe

Germany

France

UK

Italy

Russia

Middle East & Africa

Egypt

South Africa

Israel

GCC Countries

The below companies that are profiled have been selected based on inputs gathered from primary experts and analysing the company's coverage, product portfolio, its market penetration.

Bosch

AISIN

MAHLE

FORVIA HELLA

Rheinmetall

Hanon Systems

DENSO

Saleri

B?hler Motor

Concentric

Sanhua Automotive

Feilong Auto Parts

Ningbo Tuopu Group

Anhui Shinhoo Canned Motor Pump

Key Questions Addressed in this Report

What is the 10-year outlook for the global Electric Vehicle Coolant Pump market?

What factors are driving Electric Vehicle Coolant Pump market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do Electric Vehicle Coolant Pump market opportunities vary by end market size?

How does Electric Vehicle Coolant Pump break out by Type, by Application?

Contents

1 SCOPE OF THE REPORT

- 1.1 Market Introduction
- 1.2 Years Considered
- 1.3 Research Objectives
- 1.4 Market Research Methodology
- 1.5 Research Process and Data Source
- 1.6 Economic Indicators
- 1.7 Currency Considered
- 1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

- 2.1 World Market Overview
 - 2.1.1 Global Electric Vehicle Coolant Pump Annual Sales 2021-2032
 - 2.1.2 World Current & Future Analysis for Electric Vehicle Coolant Pump by Geographic Region, 2021, 2025 & 2032
 - 2.1.3 World Current & Future Analysis for Electric Vehicle Coolant Pump by Country/Region, 2021, 2025 & 2032
- 2.2 Electric Vehicle Coolant Pump Segment by Type
 - 2.2.1 Standalone
 - 2.2.2 Integrated
 - 2.2.3 Electric Vehicle Coolant Pump Sales by Type
 - 2.2.3.1 Global Electric Vehicle Coolant Pump Sales Market Share by Type (2021-2026)
 - 2.2.3.2 Global Electric Vehicle Coolant Pump Revenue and Market Share by Type (2021-2026)
 - 2.2.3.3 Global Electric Vehicle Coolant Pump Sale Price by Type (2021-2026)
- 2.3 Electric Vehicle Coolant Pump Segment by Rated Power
 - 2.3.1 ≤100 W
 - 2.3.2 >100–300 W
 - 2.3.3 >300 W
 - 2.3.4 Electric Vehicle Coolant Pump Sales by Rated Power
 - 2.3.4.1 Global Electric Vehicle Coolant Pump Sales Market Share by Rated Power (2021-2026)
 - 2.3.4.2 Global Electric Vehicle Coolant Pump Revenue and Market Share by Rated Power (2021-2026)

- 2.3.4.3 Global Electric Vehicle Coolant Pump Sale Price by Rated Power (2021-2026)
- 2.4 Electric Vehicle Coolant Pump Segment by Voltage System
 - 2.4.1 Low Voltage (<60 V)
 - 2.4.2 High Voltage (>60 V)
 - 2.4.3 Electric Vehicle Coolant Pump Sales by Voltage System
 - 2.4.3.1 Global Electric Vehicle Coolant Pump Sales Market Share by Voltage System (2021-2026)
 - 2.4.3.2 Global Electric Vehicle Coolant Pump Revenue and Market Share by Voltage System (2021-2026)
 - 2.4.3.3 Global Electric Vehicle Coolant Pump Sale Price by Voltage System (2021-2026)
- 2.5 Electric Vehicle Coolant Pump Segment by Application
 - 2.5.1 Battery Thermal Management
 - 2.5.2 Electric Drive System Cooling
 - 2.5.3 Power Electronics Cooling
 - 2.5.4 Heat Pump & Cabin Thermal Management
 - 2.5.5 Integrated Vehicle Thermal Management
 - 2.5.6 Other
 - 2.5.7 Electric Vehicle Coolant Pump Sales by Application
 - 2.5.7.1 Global Electric Vehicle Coolant Pump Sale Market Share by Application (2021-2026)
 - 2.5.7.2 Global Electric Vehicle Coolant Pump Revenue and Market Share by Application (2021-2026)
 - 2.5.7.3 Global Electric Vehicle Coolant Pump Sale Price by Application (2021-2026)

3 GLOBAL BY COMPANY

- 3.1 Global Electric Vehicle Coolant Pump Breakdown Data by Company
 - 3.1.1 Global Electric Vehicle Coolant Pump Annual Sales by Company (2021-2026)
 - 3.1.2 Global Electric Vehicle Coolant Pump Sales Market Share by Company (2021-2026)
- 3.2 Global Electric Vehicle Coolant Pump Annual Revenue by Company (2021-2026)
 - 3.2.1 Global Electric Vehicle Coolant Pump Revenue by Company (2021-2026)
 - 3.2.2 Global Electric Vehicle Coolant Pump Revenue Market Share by Company (2021-2026)
- 3.3 Global Electric Vehicle Coolant Pump Sale Price by Company
- 3.4 Key Manufacturers Electric Vehicle Coolant Pump Producing Area Distribution, Sales Area, Product Type

- 3.4.1 Key Manufacturers Electric Vehicle Coolant Pump Product Location Distribution
- 3.4.2 Players Electric Vehicle Coolant Pump Products Offered
- 3.5 Market Concentration Rate Analysis
 - 3.5.1 Competition Landscape Analysis
 - 3.5.2 Concentration Ratio (CR3, CR5 and CR10) & (2024-2026)
- 3.6 New Products and Potential Entrants
- 3.7 Market M&A Activity & Strategy

4 WORLD HISTORIC REVIEW FOR ELECTRIC VEHICLE COOLANT PUMP BY GEOGRAPHIC REGION

- 4.1 World Historic Electric Vehicle Coolant Pump Market Size by Geographic Region (2021-2026)
 - 4.1.1 Global Electric Vehicle Coolant Pump Annual Sales by Geographic Region (2021-2026)
 - 4.1.2 Global Electric Vehicle Coolant Pump Annual Revenue by Geographic Region (2021-2026)
- 4.2 World Historic Electric Vehicle Coolant Pump Market Size by Country/Region (2021-2026)
 - 4.2.1 Global Electric Vehicle Coolant Pump Annual Sales by Country/Region (2021-2026)
 - 4.2.2 Global Electric Vehicle Coolant Pump Annual Revenue by Country/Region (2021-2026)
- 4.3 Americas Electric Vehicle Coolant Pump Sales Growth
- 4.4 APAC Electric Vehicle Coolant Pump Sales Growth
- 4.5 Europe Electric Vehicle Coolant Pump Sales Growth
- 4.6 Middle East & Africa Electric Vehicle Coolant Pump Sales Growth

5 AMERICAS

- 5.1 Americas Electric Vehicle Coolant Pump Sales by Country
 - 5.1.1 Americas Electric Vehicle Coolant Pump Sales by Country (2021-2026)
 - 5.1.2 Americas Electric Vehicle Coolant Pump Revenue by Country (2021-2026)
- 5.2 Americas Electric Vehicle Coolant Pump Sales by Type (2021-2026)
- 5.3 Americas Electric Vehicle Coolant Pump Sales by Application (2021-2026)
- 5.4 United States
- 5.5 Canada
- 5.6 Mexico
- 5.7 Brazil

6 APAC

6.1 APAC Electric Vehicle Coolant Pump Sales by Region

6.1.1 APAC Electric Vehicle Coolant Pump Sales by Region (2021-2026)

6.1.2 APAC Electric Vehicle Coolant Pump Revenue by Region (2021-2026)

6.2 APAC Electric Vehicle Coolant Pump Sales by Type (2021-2026)

6.3 APAC Electric Vehicle Coolant Pump Sales by Application (2021-2026)

6.4 China

6.5 Japan

6.6 South Korea

6.7 Southeast Asia

6.8 India

6.9 Australia

6.10 China Taiwan

7 EUROPE

7.1 Europe Electric Vehicle Coolant Pump by Country

7.1.1 Europe Electric Vehicle Coolant Pump Sales by Country (2021-2026)

7.1.2 Europe Electric Vehicle Coolant Pump Revenue by Country (2021-2026)

7.2 Europe Electric Vehicle Coolant Pump Sales by Type (2021-2026)

7.3 Europe Electric Vehicle Coolant Pump Sales by Application (2021-2026)

7.4 Germany

7.5 France

7.6 UK

7.7 Italy

7.8 Russia

8 MIDDLE EAST & AFRICA

8.1 Middle East & Africa Electric Vehicle Coolant Pump by Country

8.1.1 Middle East & Africa Electric Vehicle Coolant Pump Sales by Country (2021-2026)

8.1.2 Middle East & Africa Electric Vehicle Coolant Pump Revenue by Country (2021-2026)

8.2 Middle East & Africa Electric Vehicle Coolant Pump Sales by Type (2021-2026)

8.3 Middle East & Africa Electric Vehicle Coolant Pump Sales by Application (2021-2026)

- 8.4 Egypt
- 8.5 South Africa
- 8.6 Israel
- 8.7 Turkey
- 8.8 GCC Countries

9 MARKET DRIVERS, CHALLENGES AND TRENDS

- 9.1 Market Drivers & Growth Opportunities
- 9.2 Market Challenges & Risks
- 9.3 Industry Trends

10 MANUFACTURING COST STRUCTURE ANALYSIS

- 10.1 Raw Material and Suppliers
- 10.2 Manufacturing Cost Structure Analysis of Electric Vehicle Coolant Pump
- 10.3 Manufacturing Process Analysis of Electric Vehicle Coolant Pump
- 10.4 Industry Chain Structure of Electric Vehicle Coolant Pump

11 MARKETING, DISTRIBUTORS AND CUSTOMER

- 11.1 Sales Channel
 - 11.1.1 Direct Channels
 - 11.1.2 Indirect Channels
- 11.2 Electric Vehicle Coolant Pump Distributors
- 11.3 Electric Vehicle Coolant Pump Customer

12 WORLD FORECAST REVIEW FOR ELECTRIC VEHICLE COOLANT PUMP BY GEOGRAPHIC REGION

- 12.1 Global Electric Vehicle Coolant Pump Market Size Forecast by Region
 - 12.1.1 Global Electric Vehicle Coolant Pump Forecast by Region (2027-2032)
 - 12.1.2 Global Electric Vehicle Coolant Pump Annual Revenue Forecast by Region (2027-2032)
- 12.2 Americas Forecast by Country (2027-2032)
- 12.3 APAC Forecast by Region (2027-2032)
- 12.4 Europe Forecast by Country (2027-2032)
- 12.5 Middle East & Africa Forecast by Country (2027-2032)
- 12.6 Global Electric Vehicle Coolant Pump Forecast by Type (2027-2032)

12.7 Global Electric Vehicle Coolant Pump Forecast by Application (2027-2032)

13 KEY PLAYERS ANALYSIS

13.1 Bosch

13.1.1 Bosch Company Information

13.1.2 Bosch Electric Vehicle Coolant Pump Product Portfolios and Specifications

13.1.3 Bosch Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)

13.1.4 Bosch Main Business Overview

13.1.5 Bosch Latest Developments

13.2 AISIN

13.2.1 AISIN Company Information

13.2.2 AISIN Electric Vehicle Coolant Pump Product Portfolios and Specifications

13.2.3 AISIN Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)

13.2.4 AISIN Main Business Overview

13.2.5 AISIN Latest Developments

13.3 MAHLE

13.3.1 MAHLE Company Information

13.3.2 MAHLE Electric Vehicle Coolant Pump Product Portfolios and Specifications

13.3.3 MAHLE Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)

13.3.4 MAHLE Main Business Overview

13.3.5 MAHLE Latest Developments

13.4 FORVIA HELLA

13.4.1 FORVIA HELLA Company Information

13.4.2 FORVIA HELLA Electric Vehicle Coolant Pump Product Portfolios and Specifications

13.4.3 FORVIA HELLA Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)

13.4.4 FORVIA HELLA Main Business Overview

13.4.5 FORVIA HELLA Latest Developments

13.5 Rheinmetall

13.5.1 Rheinmetall Company Information

13.5.2 Rheinmetall Electric Vehicle Coolant Pump Product Portfolios and Specifications

13.5.3 Rheinmetall Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)

- 13.5.4 Rheinmetall Main Business Overview
- 13.5.5 Rheinmetall Latest Developments
- 13.6 Hanon Systems
 - 13.6.1 Hanon Systems Company Information
 - 13.6.2 Hanon Systems Electric Vehicle Coolant Pump Product Portfolios and Specifications
 - 13.6.3 Hanon Systems Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)
 - 13.6.4 Hanon Systems Main Business Overview
 - 13.6.5 Hanon Systems Latest Developments
- 13.7 DENSO
 - 13.7.1 DENSO Company Information
 - 13.7.2 DENSO Electric Vehicle Coolant Pump Product Portfolios and Specifications
 - 13.7.3 DENSO Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)
 - 13.7.4 DENSO Main Business Overview
 - 13.7.5 DENSO Latest Developments
- 13.8 Saleri
 - 13.8.1 Saleri Company Information
 - 13.8.2 Saleri Electric Vehicle Coolant Pump Product Portfolios and Specifications
 - 13.8.3 Saleri Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)
 - 13.8.4 Saleri Main Business Overview
 - 13.8.5 Saleri Latest Developments
- 13.9 B?hler Motor
 - 13.9.1 B?hler Motor Company Information
 - 13.9.2 B?hler Motor Electric Vehicle Coolant Pump Product Portfolios and Specifications
 - 13.9.3 B?hler Motor Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)
 - 13.9.4 B?hler Motor Main Business Overview
 - 13.9.5 B?hler Motor Latest Developments
- 13.10 Concentric
 - 13.10.1 Concentric Company Information
 - 13.10.2 Concentric Electric Vehicle Coolant Pump Product Portfolios and Specifications
 - 13.10.3 Concentric Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)
 - 13.10.4 Concentric Main Business Overview

13.10.5 Concentric Latest Developments

13.11 Sanhua Automotive

13.11.1 Sanhua Automotive Company Information

13.11.2 Sanhua Automotive Electric Vehicle Coolant Pump Product Portfolios and Specifications

13.11.3 Sanhua Automotive Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)

13.11.4 Sanhua Automotive Main Business Overview

13.11.5 Sanhua Automotive Latest Developments

13.12 Feilong Auto Parts

13.12.1 Feilong Auto Parts Company Information

13.12.2 Feilong Auto Parts Electric Vehicle Coolant Pump Product Portfolios and Specifications

13.12.3 Feilong Auto Parts Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)

13.12.4 Feilong Auto Parts Main Business Overview

13.12.5 Feilong Auto Parts Latest Developments

13.13 Ningbo Tuopu Group

13.13.1 Ningbo Tuopu Group Company Information

13.13.2 Ningbo Tuopu Group Electric Vehicle Coolant Pump Product Portfolios and Specifications

13.13.3 Ningbo Tuopu Group Electric Vehicle Coolant Pump Sales, Revenue, Price and Gross Margin (2021-2026)

13.13.4 Ningbo Tuopu Group Main Business Overview

13.13.5 Ningbo Tuopu Group Latest Developments

13.14 Anhui Shinhoo Canned Motor Pump
