The electric vehicle electronic control system is the core electronic system that manages and controls the various functions of electric vehicles, including power control system, battery management system (BMS), charging management system, energy management system, vehicle control unit (VCU), various sensors and actuators, safety system, and human-machine interface (HMI). This system coordinates the starting, stopping, acceleration and deceleration of the electric motor, monitors the status and health of the battery, manages the charging process and energy distribution, optimizes the recovery of regenerative braking energy, and ensures the efficient operation and communication of each subsystem. Through real-time monitoring and data processing, the electronic control system is able to execute the driver's commands, provide vehicle status information, and take protective measures when a fault is detected to ensure the safety and reliability of the vehicle. As the 'brain' of the electric vehicle, the electronic control system not only improves the performance and endurance of the vehicle, but also enhances the driving experience and overall safety.
