The electric vehicle energy recovery system is an advanced technology designed to improve the energy efficiency and range of electric vehicles. Its working principle is to reduce energy waste by converting the vehicle's kinetic energy into electrical energy and storing it in the battery when the vehicle is decelerating or braking. When the driver steps on the brake pedal or the vehicle is in a decelerating state, the electric motor runs in reverse and acts as a generator, converting kinetic energy into electrical energy and transmitting it back to the battery for storage.

The global Electric Vehicle Energy Recovery System market size is projected to grow from US\$ 191 million in 2024 to US\$ 294 million in 2030; it is expected to grow at a CAGR of 7.5% from 2024 to 2030.
