Electric Vehicle Green Tire refers to green tires designed for electric vehicles. Green tires offer lower rolling resistance and better wet grip than conventional tires containing only carbon black as a filler: the magic triangle of tire technology: tires with silica/silane systems can reduce fuel consumption by up to 8 percent due to lower rolling resistance. Electric vehicles, due to their instantaneous maximum torque output, place higher demands on tire wear and load. Therefore, the use of tires designed specifically for electric vehicles can provide better durability, grip and reduced noise and vibration, resulting in a safer and more comfortable driving experience.

The global Electric Vehicle Green Tire market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
