The global Electric Vehicle High-Voltage Cable market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

A high-voltage cable for electric vehicles is a cable that carries an electric current and generates heat from the conductor. It is exposed to additional heat from the engine exhaust, so the ability to maintain sufficient heat resistance for an extended period of time is a critical feature of this cable. High voltage cables in hybrid and electric vehicles are color-coded to warn of their potential danger, usually in orange but some models have blue cables instead. Cables running internally through vehicles can generally be divided into two voltage categories ? low voltage, between 0 and 60 V, and high voltage, which typically means anything above 60 V.

United States market for Electric Vehicle High-Voltage Cable is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
