According to our LPI (LP Information) latest study, the global Electric Vehicles Wireless Charging market size was valued at US\$ million in 2023. With growing demand in downstream market, the Electric Vehicles Wireless Charging is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Electric Vehicles Wireless Charging market. Electric Vehicles Wireless Charging are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Electric Vehicles Wireless Charging. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Electric Vehicles Wireless Charging market.

Wireless charging for cars looks something like this: The driver pulls into a garage or parking space and positions the front of the car over a power mat (Gruzen calls it a “pizza box”) on the ground. Some charging pads will be built into the surface and won’t protrude upward at all. If the car is positioned right, charging begins automatically. The technology is based on inductive charging, which involves electricity being transferred via an air gap between two magnetic coils. It’s similar to how wireless phone chargers work, but here the scale is significantly larger.

Global EV sales continued strong. A total of 10,5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe

emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.
