An electric vibratory rake is a tool used for land preparation and leveling, which uses an electric drive and a vibrating mechanism to remove weeds, gravel, small trees and other unwanted substances on the land surface, thereby making the land surface more even and neat. Electric vibratory rakes usually consist of the following main components:

Electric Drive: Usually an electric motor or electric motor, used to provide power to drive the vibrating mechanism. **Vibrating mechanism:** This is the key part of the electric vibrating rake, usually consisting of a set of vibrating devices or vibrating plates, which loosens and throws debris on the soil surface by means of vibration. **Rake tines:** Rake tines are parts used to contact the soil and throw debris out. They are usually located at the bottom of the vibrating mechanism and can be adjusted and replaced as needed. **Handle or Handle:** Used to steer and control the direction of movement of an electric vibratory rake. Electric vibratory harrows are used in a wide variety of applications in agriculture, horticulture, land clearing, and construction. It can improve the efficiency of land preparation, reduce human labor, and make the land surface smoother, providing a better foundation for subsequent planting or construction work.
