The global Electric Weeders market size is predicted to grow from US\$ 1895 million in 2025 to US\$ 2476 million in 2031; it is expected to grow at a CAGR of 4.6% from 2025 to 2031.

The electric weeder can help cut weeds and some wild plants through the long shaft and high-performance cutting end, which can help to better handle the growth of lawns and gardens, and make roads and courtyards more beautiful.

Increase in new home construction and home improvement activities, such as redesigning and rebuilding of lawn areas and garden reconstruction, coupled with high consumer spending capabilities are expected to be the major factors that increase the demand for electric cordless lawn and garden tools, thereby driving the cordless electric lawn market. Furthermore, rising awareness towards repairing native gardens and hedges damaged due to weather, along with the benefits of a well-maintained lawn, is expected to boost market growth over the forecast period. Consumers' perception of gardening as a leisure activity is expected to increase the demand for products that are compact, battery-operated and facilitate their gardening activities. Additionally, rising consumer awareness regarding the health and environmental benefits of gardening is playing a vital role in expanding the electric lawn and garden tools market. Hence, rising consumer interest in gardening and rising health awareness are expected to support market growth over the next few years.
