Electric wood planer is an electric tool used for wood surface smoothing. It mainly cuts the surface of the wood board through a high-speed rotating blade shaft to quickly remove protrusions or uneven parts to achieve a uniform thickness and smooth surface. It is driven by a motor and has a built-in adjustable depth planer system. Users can set the planing thickness according to processing requirements. It is suitable for primary processing, trimming or surface finishing of wood boards. Electric wood planers are widely used in woodworking manufacturing, furniture making, building decoration and other fields. Common forms include handheld and desktop. Handheld is suitable for flexible operation and mobile construction, while desktop is more suitable for batch processing and high-precision operations. Compared with traditional manual planers, electric wood planers significantly improve work efficiency and finished product accuracy, and are an indispensable basic equipment in the woodworking industry.
