Electrical Aluminium Busbar is a solid, conductive bar made from high-purity aluminum, used for distributing electrical power within a wide range of electrical systems. It serves as a central point for collecting and redistributing current between incoming and outgoing circuits. Aluminium busbars are a cost-effective alternative to copper busbars, offering significant advantages such as lower weight, excellent thermal conductivity, and favorable strength-to-weight ratio—making them particularly suitable for large-scale or space-constrained installations. Manufactured from aluminum alloys like 1350 (noted for high conductivity) or 6101 (known for balanced conductivity and mechanical strength), these busbars are typically formed into flat, rectangular, or custom-shaped profiles. They can be bare or coated (e.g., tin- or silver-plated) depending on environmental conditions and application needs. Electrical aluminium busbars are produced through extrusion, rolling, or machining processes and are commonly integrated into switchgear, power distribution panels, substations, control cabinets, and battery energy storage systems.

United States market for Electrical Aluminium Busbar is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Electrical Aluminium Busbar is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
