Electrical Casting of Epoxy Resin refers to a type of thermosetting insulating material specifically used in the electrical industry, formulated with epoxy resin as a base and incorporating various additives such as curing agents, fillers, toughening agents, and accelerators. Before use, it is in a liquid or flowable paste state. Through processes such as casting, potting, and injection, it is filled around electrical components or into molds, and after curing, it forms a solid, dense insulator with excellent electrical insulation, thermal conductivity, and mechanical support.

Simply put, it is a specialized epoxy resin 'formulation' used to manufacture or protect the core insulating components of high-voltage electrical equipment (such as transformers, instrument transformers, insulators, switches, etc.).

United States market for Electrical Casting of Epoxy Resin is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
