The global Electrical Discharge Machines (EDM) market size is predicted to grow from US\$ 2773 million in 2025 to US\$ 4174 million in 2031; it is expected to grow at a CAGR of 7.1% from 2025 to 2031.

Electrical discharge machining (EDM), also known as spark machining, spark eroding, burning, die sinking, wire burning or wire erosion, is a manufacturing process whereby a desired shape is obtained by using electrical discharges (sparks). Material is removed from the work piece by a series of rapidly recurring current discharges between two electrodes, separated by a dielectric liquid and subject to an electric voltage. One of the electrodes is called the tool-electrode, or simply the 'tool' or 'electrode,' while the other is called the workpiece-electrode, or 'work piece.' The process depends upon the tool and work piece not making actual contact.

Global core electrical discharge machines (EDM) manufacturers include Mitsubishi Electric, Sodick and GF Machining etc. The top 2 companies hold a share about 40%. Japan and China is the largest market, with a share about 56%, followed by Europe with the share about 23%. In terms of product, wire cutting machine is the largest segment, with a share over 50%. And in terms of application, the largest application is automotive and production machinery, followed by electronics.
