The global Electrical Epoxy Compound market size is predicted to grow from US\$ 358 million in 2025 to US\$ 491 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Electrical epoxy compound refers to a type of thermosetting insulating material specifically used in the electrical industry, formulated with epoxy resin as a base and incorporating various additives such as curing agents, fillers, toughening agents, and accelerators. Before use, it is in a liquid or flowable paste state. It is filled around electrical components or into molds through processes such as casting, potting, or injection. After curing, it forms a solid, dense insulator with excellent electrical insulation, thermal conductivity, and mechanical support.

In simple terms, it is a specialized epoxy resin 'formulation' used to manufacture or protect the core insulating components of high-voltage electrical equipment (such as transformers, instrument transformers, insulators, switches, etc.).
