The manufacture of electrical instruments and meters refers to the manufacture of general-purpose instruments and devices for measuring or checking voltage, current, resistance or power, but does not include the manufacture of measuring instruments in the process of generating or supplying electricity. Electrical instrumentation generally refers to the general-purpose instrument device for measuring or checking voltage, current, resistance or power. It can usually be divided into two types. The meter is required to directly participate in the work and can indicate the value to be measured at any time; the other is a competition meter, which represents products such as bridges and potentiometers. In the process of electrical measurement, the meter needs to be directly involved in the work. Determine the value to be measured.
