According to this study, the global Electrical Railway Power Supply Systems market size will reach US\$ million by 2031.

Electrical Railway Power Supply Systems include AC and DC Electrification System. AC Electrification System consists mainly of AC power feeding equipment such as a large and medium capacity power feeding transformers which convert 3-phase alternating current into 2-phase alternating current, auto transformers, static var compensators which compensates for imbalance in the power source, AC circuit breakers intended for use at ultra-high voltages to special high voltages, lightning arrester, single phase AC power feeding circuit breakers, and switches which can withstand frequent use. AC Electrification System consists of PWM converter, silicon rectifiers, hybrid converter, active filters, HSVCB etc. and the package type substation which equips with all the essential function into the outdoor enclosures, has been developed.

According to the data of China Association of Metros, by the end of 2022, 55 cities in mainland China have opened urban rail transit and 308 operating lines. The total length of operating lines is 10287.45 km, ranking first in the world and accounting for 26.2% of the total global mileage. 1080.63 km of new operating lines were added in 2022. By the end of 2022, 545 cities in 78 countries and regions will have opened urban rail transit, with more than 41,386.12 km of operational mileage. Compared to 2021, the total mileage of urban rail transit worldwide would increase by 4,531.92 km, an increase of 11.0%, of which 1,293.45 km of subway mileage, 788.11 km of light rail mileage and 2,450.36 km of tram mileage would increase, accounting for 28.5%, 17.4% and 54.1% of the total increase respectively.
