## Abstracts

The global Electrical Safety Monitoring System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The electrical safety monitoring system conducts all-round detection of electrical hazards in real time by installing temperature, smoke, overload current, leakage, short circuit, combustible gas, dust and other sensors, and transmits the detection data to the database cloud in real time. Through the cloud computing platform, the data before and after are compared, and the change value per unit time is calculated to make dynamic judgments to avoid false alarms due to environmental factors and improve the efficiency of fire warning. When leakage, short circuit occurs, or overload current, temperature, or smoke exceeds the limit value, on-site and background monitoring platforms will generate alarms in time, and the data can be uploaded to the cloud immediately, and the contact can be notified via SMS, WeChat, or phone within a very short time. In case of emergency, directly notify the fire protection and safety supervision departments.

The principle of setting up the electrical safety monitoring system is that it should be configured at the incoming or outgoing end of the final distribution cabinet of the low-voltage distribution system to monitor the lines and equipment from this level to the end user. At present, the electrical safety monitoring system is indeed a major technological progress compared with traditional technical means, but there are still many shortcomings and there is a lot of room for improvement. China's electrical safety monitoring system product market has just begun, and the market space will be amazing. It will be a golden growth point for safe electrical products in the future.
