The global Electrical Solder Flux market size is predicted to grow from US\$ 279 million in 2025 to US\$ 417 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Soldering flux refers to one of the essential elements for creating strong, reliable, and robust solder joints. It refers to a type of chemical material that applies on the joint surface to fix it before soldering. However, flux aids in removing impurities and oxidation from the surface of the metal. Thus ensuring that solder flux adheres to the surface properly. Moreover, it also assists in preventing the solder from oxidation while soldering, as it may weaken the solder joint.
