According to this study, the global Electrical Stimulation Therapy market size will reach US\$ 3910 million by 2031.

Electrical stimulation, or e-stim, is a physical therapy treatment modality used to improve muscle function, decrease pain, or promote healing.

A significant driver in the Electrical Stimulation Therapy market is the increasing recognition of non-invasive and drug-free treatment options for various medical conditions and pain management. Electrical Stimulation Therapy, which uses electrical impulses to stimulate nerves and muscles, offers an effective alternative for pain relief and rehabilitation. However, a notable challenge in this market is the need for clinical evidence and standardization. Ensuring that electrical stimulation therapy protocols are backed by rigorous clinical studies and adhering to standardized treatment guidelines poses a significant challenge. Healthcare providers and manufacturers must collaborate to advance research, establish best practices, and educate the medical community to optimize the efficacy and acceptance of electrical stimulation therapy as a valuable modality in healthcare.
