## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Few transformers fail due to old age per se, but rather as a consequence of external faults, short circuit faults, insulation failure (dielectric failure), local overheating (causing gassing) or accessory failure (e.g. bushings, tap changers, coolers, surge-arresters). Repairing a transformer instead of replacing can substantially reduce investment costs and provide a faster turnaround than buying a new transformer.
