Electric water pump is activated by battery and motor only on demand for cooling. The just function minimizes the load on engine. Electric water pumps are a part of a growing number of newer vehicles where higher efficiency engines are demanded. Aside from providing standard engine cooling, they reduce engine load and can be controlled by sensors to provide the necessary amount of coolant at any time. Some new vehicles even use up to three pumps for various systems, including cabin heating, turbocharger and battery system cooling.

Global Electric Water Pumps key players include Bosch, Continental, Aisin, Rheinmetall Automotive, etc. Global top four manufacturers hold a share over 75%.

Europe is the largest market, with a share about 55%, followed by Japan, and North America, both have a share over 30 percent.

In terms of product, 12V EWP is the largest segment, with a share over 70%. And in terms of application, the largest application is Engine, followed by Battery, Turbocharger, etc.
