The global Electrically Conductive CVD Diamond Heat Spreader market size is predicted to grow from US$ 435 million in 2025 to US$ 792 million in 2031; it is expected to grow at a CAGR of 10.5% from 2025 to 2031.

Diamond has thermal conductivity five times that of copper and is an electrical insulator, making for a perfect heat sink. CVD Diamond has all of the properties of single crystal diamond without many of the size and shape limitations. Use the ultra-high thermal conductivity of diamond for temperature critical packages. Higher power in smaller devices and the integration of these to other devices present heat dissipation challenges. High thermal heat flux significantly impacts performance and reliability. The unsurpassed thermal conductivity of diamond and its high electrical resistivity, allow for increased microprocessor frequency, higher output power, smaller parts and longer lifetimes.
