Electrically insulating floor mats are safety protection materials laid in areas where electrical equipment is operated. They are typically made of high-insulation rubber or composite materials to isolate the human body from the conductive path of the ground, preventing step voltage and electric shock accidents, and ensuring the safety of electrical and electronic workers.

Upstream sources mainly include raw materials such as natural rubber, synthetic rubber, insulating fillers, flame retardants, and aging-resistant additives; downstream applications are concentrated in substations, power distribution rooms, power maintenance sites, new energy power plants, rail transit, electrical control rooms, and industrial equipment maintenance.

The global unit price of electrically insulating floor mats is US\$12.8 per square meter, with annual sales of approximately 60.9 million square meters and a global annual production capacity of 62 million square meters. The industry profit margin is 25%.
