The global Electrically Opening Skylight market size is predicted to grow from US\$ 177 million in 2025 to US\$ 267 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2025, global Electrically Opening Skylight production is approximately 381 thousand square meters, with an average global market price of around US\$474 per square meter. Gross margin is about 32%. The cost is around US\$ 322 per square meter. The production capacity is about 550 thousand square meters. An electric opening skylight is a skylight that is operated by an electric drive system to open and close, commonly used in residential and commercial buildings. It typically features a motor, transmission mechanism, and control system, allowing operation via a remote control, wall switch, or smart device. Electric skylights not only offer excellent natural ventilation and daylighting but can also automatically close when necessary to prevent rainwater from entering or to maintain indoor temperature. Compared to manual skylights, electric skylights provide greater convenience and flexibility, especially in locations that are difficult to reach, offering enhanced safety and comfort.

Driven by the growth of green buildings, smart homes, and premium residential renovation, Electrically Opening Skylights are developing toward stronger airtightness, better thermal insulation, improved waterproof performance, and smarter control functions. Future products will increasingly integrate rain-sensing automatic closing, temperature-based ventilation, remote app control, voice control, solar power supply, electric shading, Low-E energy-saving glass, and building automation systems. As residential and commercial buildings place greater emphasis on natural daylight, energy-saving ventilation, comfortable living spaces, and roof-space utilization, smart electric skylights are expected to evolve from simple daylighting components into an important

part of intelligent building envelope systems.
